BEER-COOLERS

## Cooled kegs draft system

**creative,  
works  
because  
it's simple**

The cooled keg draft system is a modern and simple way to draft beers with a lot of advantages.

### Hygiene

The risk of infection is limited because the temperature of all parts is kept between 2 and 4 ° C.

Limited risk of supersaturation.

### Savings

No loss of beer.

Rinsing with water is not required between each keg.

30% energy saving.

40% less CO2 consumption.

### Long life

The keg can remain open for 3 weeks without altering the taste of the beer.

### Maintenance

Very easy to maintain, sanitation is limited compared to a conventional installation.

Removable refrigeration unit.
